

Retirement of Emission Certificates

Deutsche Börse AG has compensated their 2020 greenhouse gas emissions via the retirement of 9,171 emission certificates.

The emissions calculation was performed by Deutsche Börse AG. The total emissions calculated were 9,171 t CO₂e.

KlimaManufaktur GmbH compensated the following volume of emissions on behalf of Deutsche Börse AG for 2020:

9,171 t CO₂e*

The certificates originate from the wind power plant project of Los Santos in Costa Rica (Clean Development Mechanism [CDM 6275], Gold Standard [GS 3405], Vintage 2018/2019). The retirement of the certificates was performed in the Union Registry account of FutureCamp Climate GmbH on behalf of KlimaManufaktur GmbH.

The emissions were compensated through the purchase and retirement of the emissions certificates by KlimaManufaktur GmbH. The costs for the certificates have been settled by Deutsche Börse AG.

*CO₂e (CO₂ equivalent) is the internationally accepted measurement for the climate effect of greenhouse- gases and corresponds to the climate effect of 1 t of CO₂.

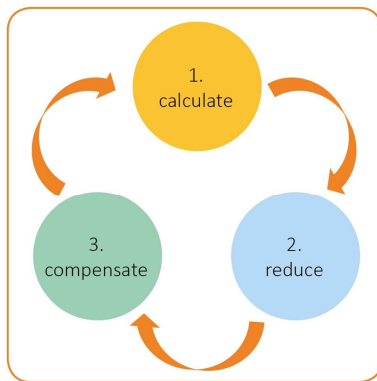

KlimaManufaktur

Standardised and individual products and services for your contribution towards climate protection

KlimaManufaktur is part of the FutureCamp Family. The experts at FutureCamp have been advising in their specialist areas: climate, energy, environment, sustainability and innovation since 2001. They are also available to advise customers of KlimaManufaktur on a range of expert topics.

Climate protection from A to Z

1. Carbon footprinting - as change will only happen if the impact is known
2. Reduction of CO₂ emissions and lowering of carbon footprint
3. Compensation of non-avoidable CO₂ emissions

Our climate protection projects

When selecting our climate protection projects, we pay attention to internationally recognized standards and requirements. Since we have developed more than 100 CDM, JI and VER projects ourselves, we know which criteria are important.

All climate protection projects in our portfolio follow the principle of "additionality", which ensures that the CO₂ emissions thereby avoided would not have been saved without the realization of the project.

In addition, all our climate protection projects make a local contribution to sustainable ecological, economic and social development and therefore support the United Nations' Sustainable Development Goals.

We have compiled an overview of climate protection projects for you on our website:
